

OUR PLANTS

*Organically-grown from seed on
family farms in CT and ME*

*Superior genetics purposefully bred
to maximize both terpenes and
cannabinoids*

*Third-party tested for Cannabinoid
and terpene profiles, and screened
for heavy metals, microbiological
contaminants and pesticides.*

Hand harvested, dried and cured

From seed to bottle, US HempCare creates premium organically-grown hemp CBD products. We grow our own hemp and test our plants and products at every phase of production for both contaminants and cannabinoids. Manufactured following cGMP guidelines for dietary supplements, we ensure highest quality and effectiveness in our products.

Our farms follow the strictest organic standards – no pesticides, herbicides or non-organic fertilizers (same with our greenhouses). We grow our hemp in the Connecticut Valley – taking advantage of the unique micro-climate and world-renowned soil.

Our finished products are truly full-spectrum – containing a broad range of cannabinoids and our own steam-distilled terpenes. We never use artificial coloring or flavoring and use the highest quality ingredients available.

We set the standard for the highest quality and consistency in premium hemp CBD extracts and finished products. We also offer full transparency; scan the QR code on our product labels to see our 3rd party analysis and testing and trace our products back to the actual plants we grow.

FROM SEED... ...TO BOTTLE

Learn our story

Our difference is our farms.

We grow organically on family farms,
testing from soil to seed to bottle...

US HempCare - more farms, less pharmas.

OUR TERPENES

Often overlooked in relation to the more prevalent cannabinoids, terpenes appear to mediate our body's interactions with cannabinoids. Both our CT Abacus and CT Wife contain predominantly Myrcene and Pinene which studies suggest may help with pain and inflammation. Our peppery CT Abacus terpenes also contain large amounts of b-Caryophyllene, which studies suggest also help with pain.*

Our citrusy CT Wife terpenes contain larger amounts of Limonene, which studies suggest may help provide elevated mood and anxiety relief

OUR PROCESS

Our finished products are manufactured following CGMPs (Current Good Manufacturing Practices) for dietary supplement manufacturing which apply to all aspects of production, storage, facility design, equipment maintenance, record keeping, cleanliness, pest control and complete traceability of all products from beginning to end.

We set the standard for the highest quality, consistency and transparency in hemp CBD extracts and all our consumer products.

OUR PRODUCTS

We produce tinctures of our two cultivars in three different strengths. We have a pet tincture, and it has a great history of its own. We have capsules, and gelcaps, a topical rub, honey, and we make the best tasting CBD gummy around!

These products have not been evaluated by the FDA and are not intended to diagnose, treat, cure or prevent any disease.
